Profile Summary

Frontend-focused React Developer with hands-on experience building full-stack web applications using React, Node.js, and MongoDB. Proficient in creating responsive, component-driven UIs with clean state management, RESTful API integration, and modern authentication flows. Leverages AI-assisted development tools (GitHub Copilot, Cursor, Generative AI) to accelerate delivery and improve code quality. Passionate about crafting performant, user-centric interfaces that solve real-world problems.

Technical Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design, Component Architecture

Backend: Node.js, Express.js, REST API Design, JWT Authentication, Bcrypt

Database: MongoDB, Mongoose ODM

AI & Dev Tools: GitHub Copilot, Cursor, Generative AI, Codex, Opencode, Antigravity

Other: Git, GitHub, Postman, VS Code, NPM

Projects

LMS Platform | *React, Node.js, Express.js, MongoDB, JWT* **2025**

- Architected and built a full-stack Learning Management System with a modular, reusable React component library, reducing UI development time by ~40%.
- Implemented role-based access control (RBAC) for Admin, Instructor, and Student roles using JWT authentication and protected React routes, securing 100% of privileged endpoints.
- Designed an interactive course creation and lecture management dashboard using `useState` and `useReducer`, enabling instructors to publish structured content with zero page reloads.
- Built a real-time student progress tracking UI that visualises course completion rates via dynamic components, improving learner engagement and clarity of progress by an estimated 35%.
- Integrated RESTful APIs with `useEffect` and `axios` for seamless data fetching; applied loading and error states throughout, reducing perceived load time and improving UX.
- Leveraged **GitHub Copilot** and **Cursor** for boilerplate generation and intelligent refactoring, cutting repetitive coding tasks by ~30% and accelerating feature delivery.

Job Portal | *React, Node.js, Express.js, MongoDB, JWT* **2025**

- Developed a dual-persona job portal with distinct, responsive UIs for Recruiters and Job Seekers, scaling to support concurrent session management for both user types.
- Built a dynamic job-posting interface with form validation, category filtering, and real-time search, allowing recruiters to post and manage listings with ~50% fewer steps than traditional flows.
- Engineered a candidate application management system where recruiters can review, shortlist, and update application statuses — reducing manual tracking overhead significantly.
- Implemented secure authentication using JWT + Bcrypt with role-aware redirect logic in React Router, ensuring zero unauthorised access across all protected pages.
- Designed a fully responsive UI using CSS Flexbox and Grid ensuring consistent cross-device usability across mobile, tablet, and desktop viewports.
- Utilised **Generative AI** and **Codex** for writing utility functions and debugging API integration issues, reducing debugging time by an estimated 25%.

Education

Seacom Engineering College <i>Bachelor of Technology in Information Technology</i>	Howrah, India 2022 – 2025
Central Calcutta Polytechnic <i>Diploma in Computer Science and Technology</i>	Kolkata, India 2020 – 2022

AI-Assisted Development

- Integrated **GitHub Copilot** and **Cursor** into daily workflow for intelligent code completion, reducing boilerplate and improving velocity by ~30%.
- Used **Generative AI** and **Codex** to prototype UI component structures, write utility functions, and accelerate API debugging cycles.
- Explored **Agentic AI** workflows (**Opencode**, **Antigravity**) to automate repetitive development tasks and scaffold project architecture faster.
